

Stockholm, February 14th 2014,

A+ Science is proud to announce that Eva Stenqvist and Liselotte Persson have joined the company in order to further strengthen the company's operational services within Pharmacovigilance and City Site, the company's Site Management Organization (SMO).

Eva Stenqvist joins the company as Safety Officer. Eva is a pharmacist with many years of experience within pharmacovigilance and regulatory affairs. She has worked at several pharmaceutical companies on Nordic basis. She has also worked as EU QPPV at a generic pharmaceutical company. She has been involved in pharmacovigilance inspections under the new legislation. Eva will strengthen the company's pharmacovigilance department and work in-house with customers, i.e. small and medium size companies.

"I am happy to join A+ Science since it is a company expanding its already well-established pharmacovigilance services. I am looking forward to work customer focused and support our customers in order to achieve excellence within their pharmacovigilance activities", says Eva Stenqvist.

Liselotte Persson joins the company as Study Coordinator and Research Nurse at A+ Science City Site, the company's Site Management Organization (SMO). Liselotte has extensive experience within the field of cardiology. She has worked as Study Coordinator in several studies. During the period of 2005-2013, she was a member of the Heart Transplantation Team in Lund. Liselotte's contribution as experienced Research Nurse will be very valuable at City Site, especially during her daily contact with the patients.

"I started working at A+ Science in January after moving to Stockholm with my family. I had heard many good things about the company and was recommended to apply for the position of Research Nurse, I absolutely do not regret the decision I took. I am now looking forward to work with the team and learn more about the company and the clinical trials we are involved with, it is very challenging" says Liselotte Persson.
