

## A+ Science Newsletter

*"No one is useless in this world who lightens the burdens of another"*

Charles Dickens

---

Another year is soon to end, 2022 has been a good year. We have started several new clinical trials and supported new clients with our pharmacovigilance services. We have participated in live events and things have been moving towards the right direction. We took the opportunity and asked our CEO Eva Fredriksson about the biggest strength of our company; this is what she said:

*"It makes me a proud CEO as I announce that we have crossed another milestone in the history of our company, 25 years. Our company has had countless achievements and accomplishments. Without the support of our excellent team, we would have never made it. Everyone plays a very important role in the development of our company and that is the strength of our company. We are also grateful to our clients and partners who put their trust in us to help them provide our services. Their demands, challenges and feedbacks have pushed us to go ahead and improve vigorously. They spread the word faster and in a better way than any of our promotional means could. We plan to keep our business and relation growing with our clients and partners and continue providing them nothing less than the best."*

Since we crossed this important milestone and since Christmas is just around the corner, we took a joint decision to skip the Christmas party this year and instead donate to the Swedish Child Diabetes Foundation. This Christmas, A+ Science wants to join in and spread hope to all children living with type 1 diabetes.

Together with the Child Diabetes Foundation, we want to help the researchers in the search for a cure.

Type 1 diabetes is the most common, life-threatening, and incurable disease among children and young people in Sweden. The disease requires round-the-clock treatment, every day, for life. Anyone can develop type 1 diabetes at any time in their life, regardless of lifestyle or diet. People who suffer from type 1 diabetes need thousands of insulin injections and blood sugar controls each year, just to stay alive.

Throughout our 25 years, we have been involved in several type 1 diabetes studies, in fact we have an ongoing study, so donating to the Swedish Child Diabetes Foundation makes us even happier. Our research makes a difference.

We would now like to wish all our readers a merry Christmas and a very happy new year.

**2022 ger vi vår julgåva till**
