

A+ Science Newsletter, February 2019

"Success is not final, failure is not fatal: it is the courage to continue that counts."

Winston S Churchill

In this newsletter we wish to remind our readers about our services.

A+ Science is a Contract Research Organisation (CRO) run by its employees. We provide services in clinical trials for pharmaceuticals (Phase I-IV) as well as medical device studies. We also offer broad expertise within pharmacovigilance services during clinical trials and post marketing.

Our core expertise is in the Nordic Countries, however through our close collaboration with several CROs, we cover additional geographical locations.

Our services include Clinical Trial Management (either from start to end or parts of it), Pharmacovigilance Pre-and Post-Marketing, Regulatory Affairs, Outsourcing of Consultants, Continuing Medical Education and other services.

We assemble clinical teams specific to your study needs. Our company offers custom-made and flexible CRO solutions that increase efficiency and reduce costs associated with bringing new pharmaceuticals to market. Remember, if you are planning to conduct a clinical trial in Stockholm and you choose ProbarE as the investigational site and A+ Science as your CRO partner, you will not have monitoring travelling expenses, since ProbarE and A+ Science have their

locations on Luntmakargatan, a cost-efficient solution. Moreover, the study team members will work in a close and efficient way, which is very valuable.

A+ Science team actively encourages innovation while helping customers achieve their research goals and improve patients' lives. We are small enough to care, large enough to deliver

Do not hesitate to contact us at info@aplusscience.com and hear more about how we can help you conduct your clinical trial.
