

A+ Science Newsletter, August 2016

"You must do the thing you think you cannot do"

Eleanor Roosevelt

A+ Science, a CRO run by its personnel

Our vision is to become the CRO best known for its unique and dedicated personnel with focus on customer satisfaction. To Earn Trust- Make Difference.

We are back with our monthly newsletter after July break. We hope everyone had a fantastic and relaxing summer.

In this newsletter we would like to introduce you to two of our Clinical Research Managers (CRM), Christina Hessle PhD and Andreas Karnehed M Sc. Christina and Andreas are part of our clinical operations. Here is what they think of our company.

"Working as CRM and project manager at A+ Science means dealing with a wide variety of issues; from solving day to day problems with sites to major budget issues. This makes the job very diverse and interesting. During my 10 years at A+ Science I have had the possibility to work with different therapeutic areas, both pharmacological and medical device trials. Furthermore, as we work for clients ranging from very small companies to big pharma, I have had the opportunity to gain insight into different ways of organizing trials.

Christina Hesse

Since we are a small team it is very important that everyone is committed to his or her task and feels the same kind of responsibility for our projects, no matter which role one has in the company. This, together with our flat organization creates a positive working environment and a mutual satisfactory feeling amongst us. The combination of variation, responsibility and independence that we have at A+ Science is something I appreciate very much", says Christina.

"I am very happy to be part of the dedicated team at A+ Science. I joined the company two years ago and it has been two inspiring and optimistic years. The company is really moving forward within all its business areas and it is very exciting to work at a company that is run by its employees.

I like the flexibility of my colleagues and of the company and also the challenge to meet each sponsor's specific request for support and collaboration. The knowledge within the company is a great asset. The size of the company also gives me the opportunity to work in different therapeutic areas, with different sponsors, with both pharmaceuticals and medical devices and in different countries. This is very developing and great to combine with my previous experiences from the big pharma", says Andreas.

Andreas Karnehed

A+ Science will be attending several events. If you will be participating and wish to meet us there, please send an email to info@a-plusscience.com

Nationell konferens om kliniska studier, 6-7 September in Uppsala
