

## A+ Science Newsletter, February 2018

*"It's not the tools you have faith in - tools are just tools - they work or they don't work. It's the people you have faith in or not."*

Steve Jobs

---

In this newsletter we want to introduce our Pharmacovigilance (PV) Department. We have asked Janet Post, Medical Director and Anne Lindfors, Drug Safety Officer to say a few words about our PV Department.

*"Time flies, I have been part of A+ Science for almost one year now. Much positive has happened at our Pharmacovigilance department. We have expanded our personnel to meet our customers' needs for pharmacovigilance services both during clinical development (Investigational Medicinal Products and Medical Devices) and Medicinal Products after marketing authorization. Our talented Pharmacovigilance team is taking care of our customers (pharmaceutical, generic, biotech and medical device companies, Clinical Research Organisation (CROs) and individual academic researchers) in a professional and personal way. Since we are a small company, we work together with our customers as partners. The aim of pharmacovigilance is the safety and more effective use of medicines for everyone,"* says Janet Post.

*"Pharmacovigilance is growing at A+ Science. Our group consists of people with different background and experience. We complement each other in a positive way. We have a great variation of assignments, which is stimulating. We cover all parts of the PV work, everything from case management to QPPV assignments, post marketing and study assignments. A positive aspect of working at a CRO is the wide variety of tasks and the experience we get from working with different companies, with widely different product portfolios and needs. In this way you learn a lot and*

*develop quickly. In my opinion, PV is an area which becomes more fun the more you learn, this is indeed something desirable," says Anne Lindfors.*

If you are interested in our Pharmacovigilance services, please contact
