### **A+ Science, a CRO run by its personnel**

*Our vision is to become the CRO best known for its unique and dedicated personnel with focus on customer satisfaction. To Earn Trust- Make Difference.*

In this newsletter we will focus on our CME services.

Continuing Medical Education (CME) can be defined as educational activities the aim of which is to improve the skills and knowledge of physicians and other medical professionals and ensure better and safer treatments for patients.

A+ Science in collaboration with University Hospitals, provides expertise in accreditation of CME activities. We have assisted in the accreditation of 71 CME events, the majority within cardiology. For more information about CME, contact us at [cme.information@a-plusscience.com](mailto:cme.information@a-plusscience.com)

*"I have been involved in the CME activities since 2009. We assist in the administrative procedures of the CME activity while the University Hospital assists with the scientific content and review process. The collaboration works extremely well. We know and respect each other's role, we do what we are good at and they do what they are good at, the ideal solution. I also love what I do, so that makes a difference",* says Tania Persson, CME Project Manager.

In August, during our CME session at ESC Congress 2016, the world's largest cardiovascular congress, 32 897 delegates participated in this congress, one of the delegates was His Holiness Pope Francis who came and gave his blessings.

His Holiness Pope Francis receives a Papal stethoscope from the ESC President Professor Fausto Pinto

A+ Science will be attending the below events. If you will be participating and wish to meet us there, please send an email to [info@aplusscience.com](mailto:info@aplusscience.com)

SwedenBIO Summit, 7 December, Stockholm

Pharma Outsourcing, 8 December, Stockholm Waterfront
