

“The only thing worse than being blind is having sight but no vision” Helen Keller

A+ Science, a CRO run by its employees

Our vision is to become the CRO best known for its unique and dedicated personnel with focus on customer satisfaction. To Earn Trust- Make Difference

In our previous Newsletter of August we mentioned that A+ Science was expanding and recruiting. A+ Science is proud to announce that Emelie Andersson, Andreas Jendeberg and Andreas Karnehed have joined the company.

Emelie Andersson joins the company as Safety Associate. Emelie carries the degree of Masters in Medical Science and has worked as a researcher within Preclinical R&D – in vivo pharmacology. She has a broad experience within local and global literature search.

“With a background in pre-clinical research, the pharmacovigilance field is all new to me. I find it exciting, stimulating and challenging. I am very happy to have become part of the A+ Science team, a very inspiring company with a big heart”, says Emelie Andersson.

Andreas Jendeberg joins the company as Clinical Research Associate (CRA). Andreas is a pharmacist with experience from both the community pharmacies and the pharmaceutical industry. Andreas has worked as a Clinical Research Associate for the last couple of years, monitoring clinical studies throughout the Nordic Countries.

“Already during my day 1 meeting at A+ Science, I sensed that this was a professional company with good working environment and close collaboration amongst the colleagues. I can now confirm that my judgment was correct and I took a right decision to join the A+ Science team”, says Andreas Jendeberg.

Andreas Karnehed joins the company as Clinical Research Manager. Andreas has more than twelve years of experience from the pharmaceutical industry. During the last eight years he has been working with clinical trials as Project Manager and Clinical Research Associate (CRA). He started his career in the pharmaceutical industry within the area of pharmacovigilance. He has worked with country project management of worldwide mega-trials within the cardiovascular area, as well as country project management within other therapeutic areas e.g. oncology, urology and women's health. Andreas will strengthen the company's in-house department for clinical trials.

"I am very glad to join A+ Science since it is a relatively small Swedish company compared to the large worldwide pharmaceutical companies I have worked at previously. The company is also in a very interesting expanding stage and I am looking forward to the flexibility within the organisation and the opportunities that come along and also the short lines of communication and quick decision making processes", says Andreas Karnehed.
